

(a)

Wave W : orders released together;
the decision is which orders enter it

- source floor s_o - - AMR movement
- destination floor d_o — elevator trip

(b)

M_2 boarding window: a request with the same (g, h) and $P_e < c$ joins this trip if it arrives no later than L_e

M_1 : every request occupies its own slot for the full trip. M_3 : the four trip phases carry lognormal multipliers.
